DETAILED ACTION

Allowable Subject Matter

1. Claims 2 and 7 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
2. Claims 4-5,8-10
3. The following is a statement of reasons for the indication of allowable subject matter: Prior art fails to show, Prior art fails to show, a Saw sensor device using a slit acoustic wave having an input liquid port for inputting the liquid into the narrow slit of the piezoelectric medium; and an output liquid port for outputting the liquid of the narrow slit of the piezoelectric medium.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 1, 3 and 6 rejected under 35 U.S.C. 103(a) as being unpatentable over Wagner(4216401).

Wagner discloses a surface acoustic wave device in fig.1-8b comprising: a piezoelectric medium having a thin membrane(18) at its one portion, a medium at the other portion,

and a narrow slit(fig.8b see opening) which the slit acoustic wave passes through at it's inside; an input IDT(2)formed at the outer portion in the narrow slit of the piezoelectric medium, for transducing an electric input signal into the slit acoustic wave; and an output IDT (2)formed at the outer portion opposite to the transducing the waves into an electric signal.The method is inherent base on the structural limitations of the claim 6. Wherein,the velocity of the slit acoustic wave is shifted according to a property of the medium of the piezoelectric medium. It has been held that the functional "wereby" statement does not define any structure and accordingly cannot serve to distinguish. In re Mason, 114 USPQ 127,44 CCPA 937 (1957)
